# Agenda

- ▲ **01** Introduction to Artificial Intelligence (AI)
- ▲ **02** Future trends and use cases
- ▲ **03** Risks of AI
- ▲ **04** Where to start at your business

# Polling question #1

# Learning objectives

- ▲ Understand current and emerging uses of AI
- ▲ Learn practical steps to begin using AI
- ▲ Identify risks associated with AI implementation

# Section 1

Introduction to AI

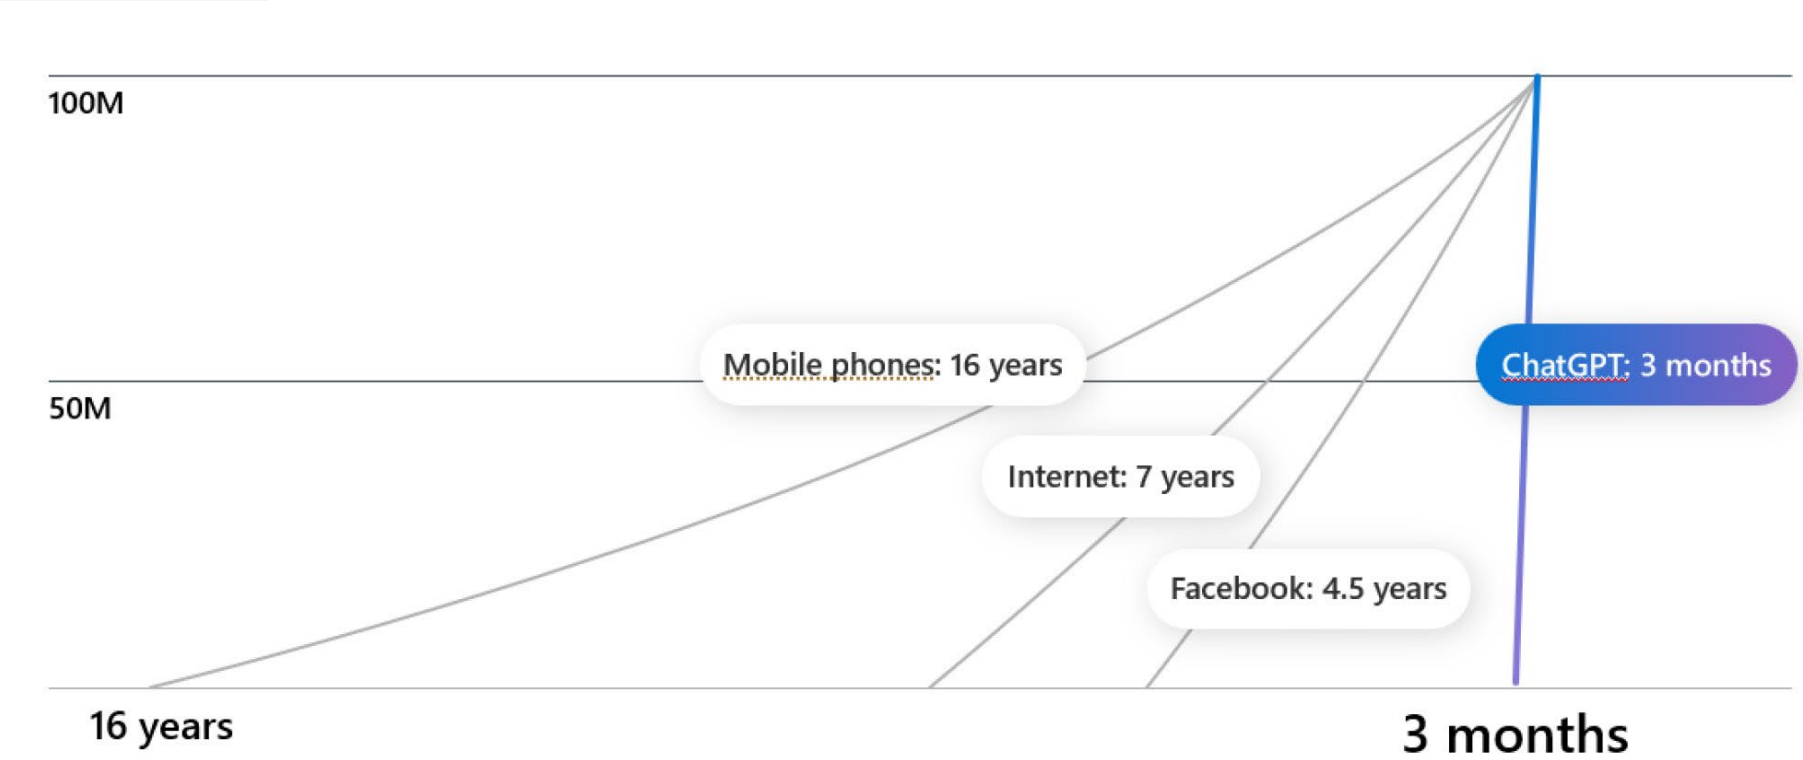

# AI definition guide

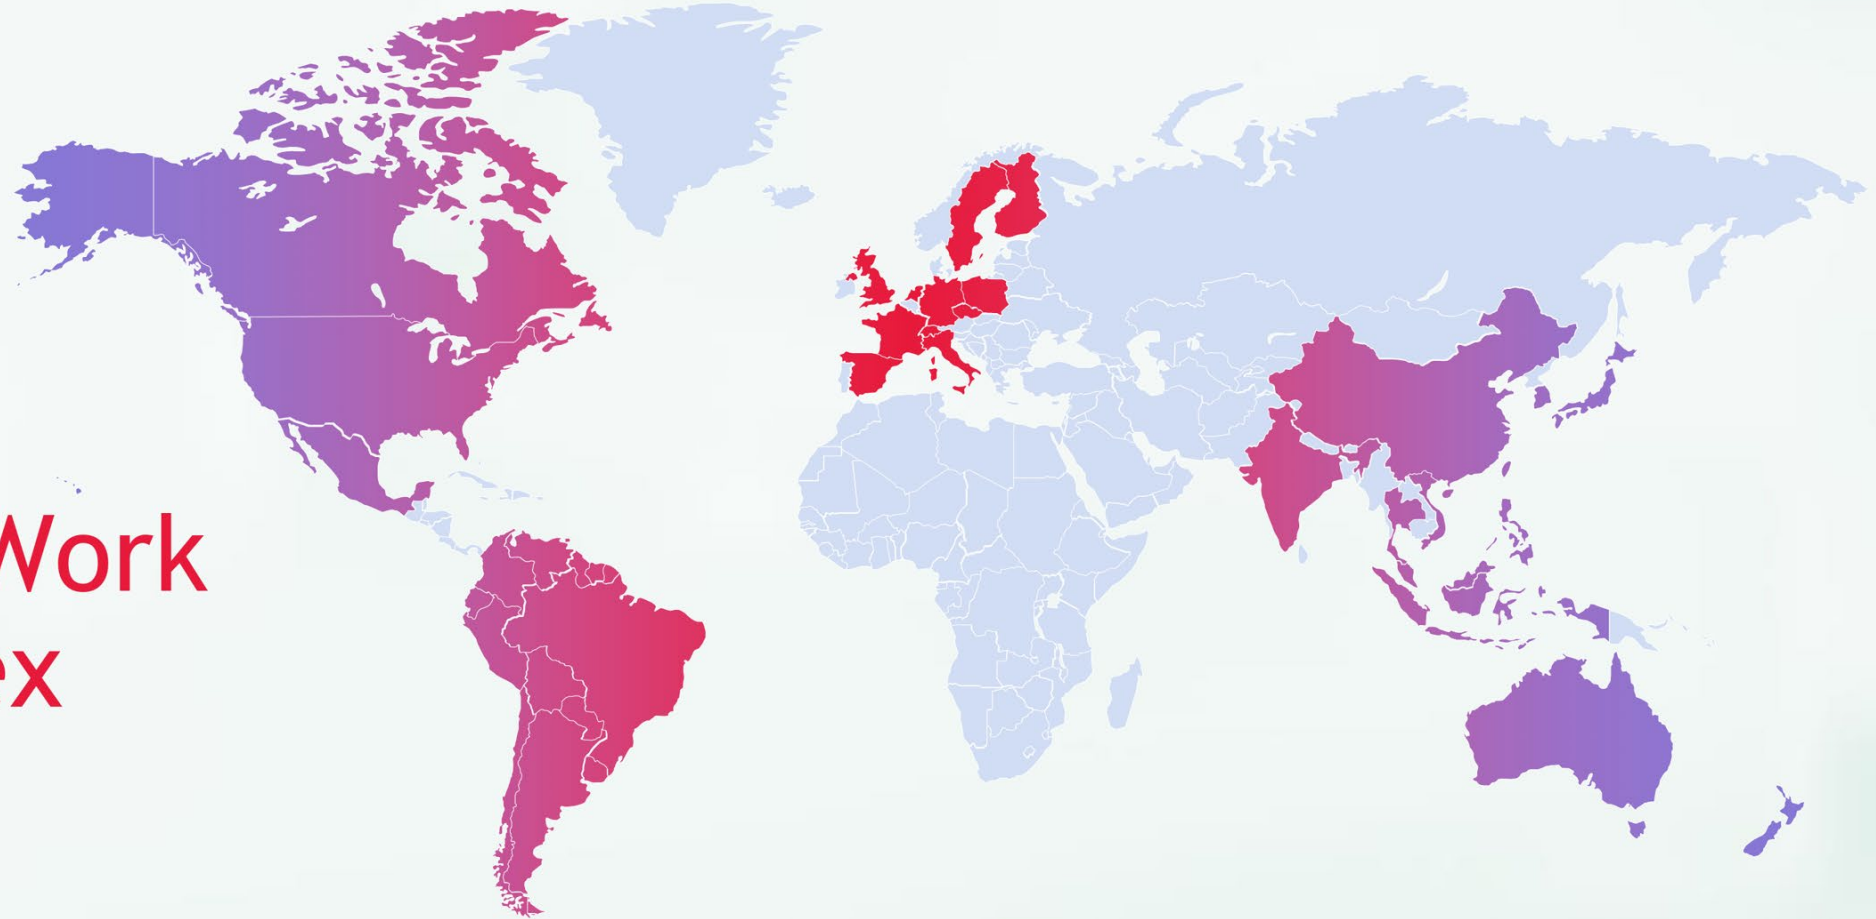

“**Artificial intelligence** refers to the development of systems that can perform tasks that typically require human intelligence, such as visual perception, speech recognition, decision-making, and language understanding.”

# AI technology and impact

# Microsoft Work Trend Index

<http://aka.ms/wti>

 **31,000** people

 **31** countries

 Microsoft 365, LinkedIn,  
Glint People Science + academic research

# AI technology and impact

## Three Out of Four People Use AI at Work

Usage nearly doubled within the last six months.

75% of people are already using AI at work

46% of them started using it less than 6 months ago

# AI technology and impact

## The New Hiring Imperative

AI aptitude takes center stage.

Leaders say early-in-career talent will get greater responsibilities due to AI

Leaders are more likely to hire a less experienced candidate with AI skills than a more experienced one without them

Leaders would not hire someone without AI skills

**Survey question:**

- To what extent do you agree or disagree with the following statements about generative artificial intelligence's (AI's) impact on skills?
- I would be more likely to hire a less experienced candidate with AI skills than a more experienced candidate without AI skills
  - In considering job candidates, I would not hire someone without AI skills
  - Because they can delegate more work to AI, early-in-career talent will be given greater responsibilities

**2024 Work Trend Index Annual Report**  
From Microsoft and LinkedIn

# AI technology and impact

## BYOAI Is Not Just for Gen Z

Employees across every age group are bringing their own AI tools to work.

Share of survey respondents who have used AI tools at work not provided by their organization

## ▲ Section 2

Enhance operations,  
drive efficiency, and  
stay competitive

# How and where can I use AI?

1

What should we do with this technology?

2

How does it enhance our operations?

3

Where can it drive efficiency?

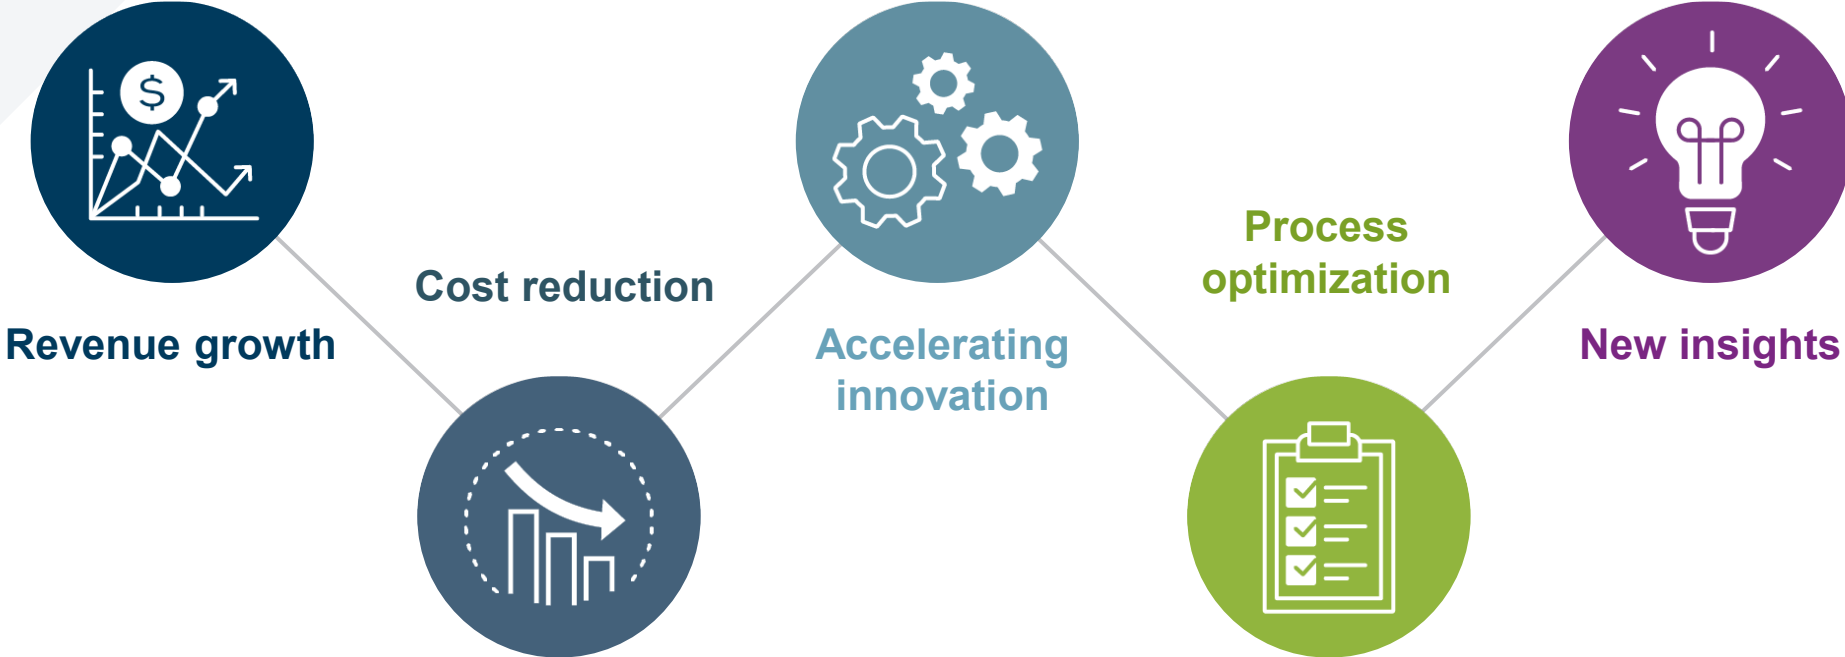

4

How do I stay competitive using AI tools?

# Generative AI business impacts

# Section 3

Demonstration of AI

# Use cases for AI solutions

# Live Demo

Screen share

# ChatGPT

ChatGPT is a generative AI-powered productivity tool that writes, brainstorms, edits and explores ideas with you.

## Browse the web

New versions allow you to access the web.

## Content creation

Assists in generating content for emails, blogs, social media, and marketing materials.

## Training and policy

Offers explanations and answers to frequent training and policy creation.

## Upload files

For assistance summarizing, writing or analyzing.

## Graphs and charts

Analyze data and create charts.

## Language translation

Translates text between different languages.

# Microsoft 365 Copilot

Copilot is an AI-powered productivity tool that is embedded in the Microsoft 365 apps that we use every day.

Draft emails, summarize email threads, and get coaching tips (tone, clarity, etc.)

Create a presentation from a prompt or word file and light commanding (adding slides, formatting, etc.)

Summarize a chat (up to 30 days) and summarize meetings with key points, task owners, and next steps

Get suggestions for formulas, chart types, and insights about data in your spreadsheet

Generate content, summarize documents, and ask questions about your document via chat

Use prompts to draft questions and suggestions that help you create surveys, polls, and other forms

# Polling question #2

# Section 4

Risks of AI

# Risks of AI

While there are several potential benefits of adopting AI, there are also significant risks associated with its use.

Bias and discrimination

Privacy and data security

Ethical concerns

Reliability and accuracy

Regulatory and legal

Job displacement

Organizational culture

Unintended consequences

# Section 5

Where to start at  
your business

# Predictive Maintenance in Manufacturing

**Example Scenario:** A factory has several CNC machines that are critical to production. Instead of following a time-based maintenance schedule (e.g., servicing every three months), the factory uses AI to monitor machine data continuously.

## How?

- 1. Install IoT Sensors:**  
Equip machinery with sensors to gather data.
- 2. Collect (and prepare) Historical Data:**  
Train AI models using historical performance and maintenance records.
- 3. Set Anomaly Thresholds:**  
Define parameters for what constitutes normal versus risky operation.
- 4. Integrate AI with Maintenance Systems:**  
Connect existing enterprise resource planning (ERP) or computerized maintenance management systems (CMMS).

## Why?

1. Reduce emergency repairs and unplanned downtime.
2. Extend the lifespan of equipment by addressing issues proactively.
3. Increase Safety by identifying risks before they escalate into hazardous situations.
4. Allow maintenance teams to focus on critical tasks rather than routine checks.

# Automating Subcontractor Invoice Processing

**Example Scenario:** A construction company receives hundreds of invoices from subcontractors for labor, materials, and equipment. Reviewing and validating each invoice manually is time-consuming and error-prone.

## How?

- 1. Digitize Invoice Collection:**  
Standardize submission of subcontractor invoices in digital format.
- 2. Train AI with Historical Data:**  
Use past invoices, purchase orders, and contracts to teach the AI model how to extract key fields
- 3. Implement OCR and AI:**  
Equip the system with to process scanned or image-based invoices and extract structured data.
- 4. Set Validation Rules:**  
Define parameters to validate invoices.
- 5. Integrate with ERP or Accounting Systems:**  
Automate approval workflows and flag discrepancies for review.

## Why?

1. Speed up invoice processing by reducing manual data entry and validation.
2. Lower administrative overhead and prevent overpayments.
3. Minimize errors in data extraction and matching, reducing payment disputes.
4. Ensure invoices adhere to contracts and budgets, reducing regulatory risks.

# Start small. Enhance over time. Keep learning.

- 1** Define clear objectives
- 2** Allocate resources
- 3** **Assess readiness and needs**
- 4** Identify and prepare data
- 5** Align tools and technologies
- 6** Pilot software
- 7** Monitor results and adjust

# Polling question #3

Workers will not be replaced by AI, but by those who understand how to make better use of AI.

# Questions?
